CONTROLS

Egripment offers a variety of Joysticks, Zoom Focus controls, Panbar, Handgrips or Crank handles to control your Egripment Remote Head. All controls include a proportional very smooth Joystick with reversing switch for pan and tilt. Also the zoom and focus can be reversed.

Most of the Controls are standard equipped with an adjustable "Electronic Damping System" (EDS) which electronically allows the operator to stop and start the pan and tilt movement smoothly.

SPECIAL MOUNTING ACCESSORIES

For those circumstances where shooting is not possible using a crane or jib arm or a dolly, if you need extra accessories for applications, Egriment offers a range of special mounting accessories.

CAR MOUNT KIT

The Egriment Car Mount Kit is designed to support your camera on the front or the sides of a vehicle with safety and stability. The Car Mount, designed to fit all types of cars, is supplied with its own flight case.

POWER GRIP

The Egriment Power Grip comprises of a large suction cup and an integrated, hand operated, vacuum pump. There is a camera platform mounted on top of the rubber suction cup, suitable for all types of film or TV cameras with a maximum weight of 50 kgs. The camera platform can be rotated in an arc of 180 degrees so it is suitable for door and/or bonnet shots when attached to a car. The Power Grip also attaches well to slightly curved surfaces.

BAZOOKA SET

Egriment's Bazooka is made up to five different risers, constructed of aluminium with a high quality nylon top, making it "Buckle Free" if dropped. The triangular aluminium base has a levelling device on each leg. The legs are also manufactured of aluminium, therefore making this Bazooka system the lightest available.

CAMERA WEDGE

The Wedge is kept simple and very practical. It is adjustable and accepts all known heads and cameras. The wedge folds down to a small convenient size, due to a small plate thickness which in no way compromises strength. A choice of four different fixing positions is provided, up to maximum of 65 degrees.

GIMBLE

Egriment's Gimble is designed to level your camera on any car rig, wooden platform, camera riser, bazooka set, etc. etc. During the set up of a fixed support for a camera it became always difficult to do this in such a way that your camera levels with the subject you want to shoot. With the use of the Gimble you do not have to take care about the level of the platform.

CAMERA CLAMP

There are two versions available, 100mm or 150mm. These clamps are ideal for tight spot locations where it is physically impossible to use a tripod.

GRIP KIT

This kit is an essential and incredibly handy tool to position very easily cameras in difficult positions. The Grip Kit can be used as a Snake, a Low Angle Bracket, an Adjustable Camera Riser and Extension Arm, its functions are endless. It can be used straight up, up-side down, high, low, sideways whatever directions you need.
