PUPPETEER

BEST SOLUTION FOR
TILT / ROLL CONTROL

PUPPETEER - GIMBAL CONTROL SIMPLIFIED

FLOWCINE

PUPPETEER - BEST SOLUTION FOR GIMBAL TILT/ROLL CONTROL

The Flowcine Puppeteer is an accessory that offers ultimate control for gimbal operators using an Easyrig. The Puppeteer helps the user tilt their rig without effort, getting rid of the string force you'd normally get with the Easyrig.

To get started using the Puppeteer, just mount it on top of your gimbal, adjust the balance so it's centered, and hook it up on your Easyrig.

The two axis system has all the features of the single axis system, but adds the second axis to eliminate errors in both the roll and tilt axis, providing the smoothest ride for your gimbal to perform fluidly without disturbing motion and vibrations. The single axis system is also compatible with the Letus Helix (grip required).

- ★ Works with all current Easyrig models
- ★ Works with all current Serene models
- ★ Compatible with DJI Ronin (Top Handle Grip Required)

- ★ Compatible with Freefly MoVI (Handle Bar Grip Required)
