

PXUMS240 Mobile Storage Unit

Pricing available upon request

Overview

The Mobile Storage Unit, Sony takes the faster speed, smaller size, larger capacity and smoother workflow advantages of shooting on SxS PRO™ Memory Cards and creates the potential for virtually unlimited recording time by copying and reformatting the SxS cards on the spot.

Highlights

- * Record Time Per HDD Cartridge: HQ Mode: More than 13 hours / SQ Mode: More than 17 hours
- * One-Touch Copy to HDD Cartridge: COPY ONLY: ~600Mbps (10min for 32GB card or approx. 10x real time). COPY & VERIFY: ~300Mbps (20 min for 32GB card or approx. 5x real time)
- * High-Speed SxS Read Transfer Function: e-SATA Interface to connect with PC (Max. 800Mbps read transfer speed). Estimated Single Cartridge Ingest Time is less than 1 Hour (up to 17 hours per cartridge @ 35Mbps)

- * Internal shock absorbers. The cartridge has an internal HDD which is suspended inside the PXU-HC240 chassis by four specially engineered dampers that help protect against shock.
- * 3G shock detection. As in a laptop PC, this system senses a potential shock and temporarily "parks" the read/write heads away from the hard disk surface, to help protect the disk from damage.
